FUTURE VISION

CORE IMPACT

Community, Operations, Resources, Environment

OUR PLEDGE

The islands of the Maldives are an extraordinary example of the beauty of our planet.

And for everyone at Atmosphere Core, it is a privilege to work here curating the magical experiences that stay with our guests forever.

But living and working in the Maldives is also a constant reminder that to maintain the pristine environment that makes this destination unique requires commitment.

This report is designed to showcase what we are doing to make an impact.

There have been great achievements at our resorts, such as tripling the contribution of solar to our energy mix, saving 2.4 million plastic bottles from going to landfill or installing thousands of coral fragments to help our marine life to flourish.

In addition, our Atmosphere Foundation is enabling a brighter future for communities in the Maldives by supporting educational initiatives, delivering civic engagement and assisting charities.

However, we recognise making a CORE IMPACT — across communities, operations, resources and environment — is a process of continuous improvement, and this report aims to benchmark our progress to date and highlight where we will do better.

Sustainability has always been at the heart of everything we do at Atmosphere Core and as we prepare to expand our footprint across South Asia, we remain committed to making an impact.
